Thank you for sending this email. I'm glad to see the comment period had been delayed. We are hoping the entire project will be denied for Boulevard.

We attended the meeting last week. It was very informative to hear how many millions of gallons of water will be needed for this project especially with the severe drought we are experiencing.

It was apparent from the powerpoint that Soitec was not very factual or truthful with the information they provided to the County Planning Department.

This area is an arid climate and the community relies solely on their groundwater supplies.

I hope the planners understand this and vote to deny these massive industrial, utility type solar projects from being built in this arid region, especially in light of this severe drought.

One gentleman suggested that since the federal government is the one promoting the alternative energy, if they have to build alternative energy plants, why don't they build these projects on federal government lands away from people seeing and being impacted by them and not on private property that will destroy all our property values? We have two beautiful homes that would be directly across the road, fifty (50) feet from these monstrous, glaring panels.

These solar panels will destroy our properties for zero benefit for the Boulevard community. The energy would not be used in Boulevard. They plan to transport to the City of San Diego or El Cajon.

Why should these massive, industrial utility plants be built in a residential community? It makes no sense and the project should be DENIED.

Thank you,
